USER INTERFACE DESIGN EXP: 4

UI/UX PROTOTYPE

SAIPRASHANTH V 240701457

1. AIM

The aim of this experiment is to design and develop a mobile e-commerce application prototype for a clothing brand named **DC Clothing (Drift Club)** using Proto.io. The objective is to create a clean, minimal, and user-friendly interface that allows users to authenticate and browse products easily.

INTRODUCTION

Modern clothing brands require intuitive and visually appealing mobile applications to enhance user engagement and improve the shopping experience. A well-designed user interface ensures smooth navigation, clear product presentation, and better usability.

To address this, a mobile prototype named **DC Clothing** was designed. The application introduces the brand, provides a login system for users, and allows browsing of clothing products in a structured layout. The design focuses on simplicity, clarity, brand identity, and accessibility.

OBJECTIVES

• To design a mobile prototype for a clothing brand
• To create a simple authentication system (Sign In / Sign Up)
• To implement a clean and structured product display layout
• To maintain consistent typography and spacing
• To incorporate familiar navigation elements
• To enhance overall usability and user experience

TOOL USED

Proto.io – A cloud-based prototyping platform used to design interactive and high-fidelity mobile application interfaces.

DESCRIPTION OF THE PROTOTYPE

The DC Clothing application consists of three primary screens:

1. Welcome Screen

This is the introductory screen of the application.

Features:
• Brand logo (DC)
• Tagline and branding text
• Welcome message (“Welcome to DC Clothing”)
• Brand description paragraph
• Call-to-action button (“Click Here”)

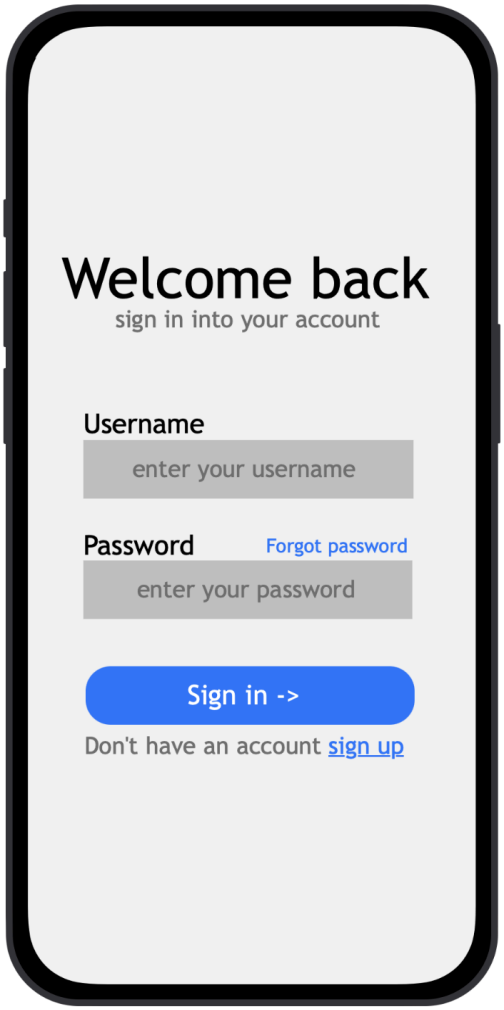
Purpose:
This screen introduces the brand identity and provides users with a clear entry point into the application.

2. Sign In Screen

This screen allows users to log in to their account.

Features:
• “Welcome back” heading
• Username input field
• Password input field
• Forgot password link
• Sign In button
• Sign Up link for new users

Purpose:
This screen follows standard authentication design patterns and provides secure access to registered users.

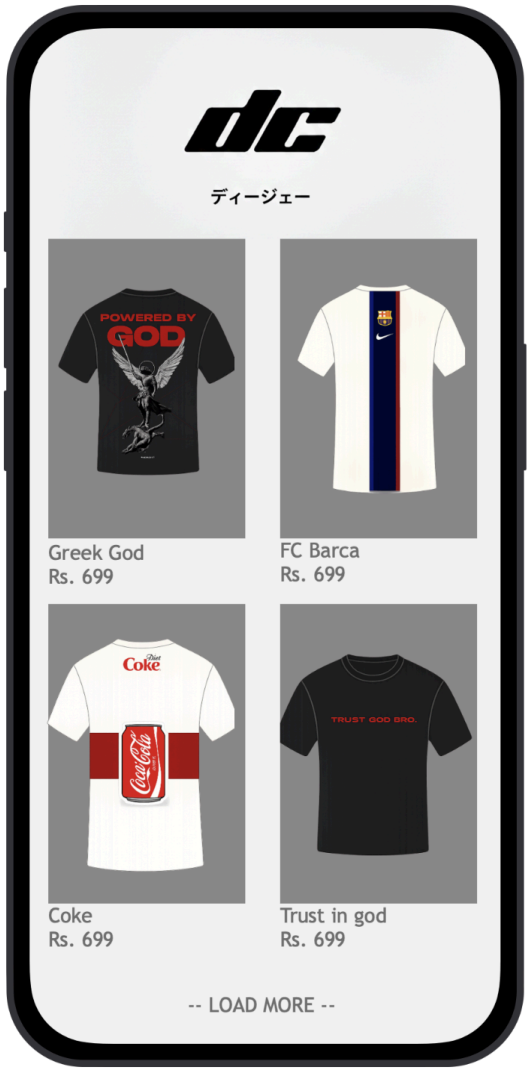


3. Product Display Screen

This screen displays the available clothing products.

Features:
• Brand logo at the top
• Two-column grid layout
• Product images
• Product names
• Price details (Rs. 699)
• “Load More” option

Purpose:
This screen allows users to browse products in a structured and organized manner.



FAMILIAR NAVIGATION ELEMENTS

The following familiar UI components were implemented:

- Sign In and Sign Up system
- Username and Password input fields
- Forgot password link
- Grid-based product layout
- Call-to-action buttons
- Scroll-based browsing

These elements reduce the learning curve and make the application intuitive for users.

DESIGN FEATURES

- Minimal grey and blue color theme
- Rounded buttons for modern appearance
- Clear typography hierarchy
- Consistent spacing and alignment
- Grid-based product presentation
- Simple and uncluttered layout

The design emphasizes readability, simplicity, and brand identity.

RESULT

The DC Clothing prototype successfully demonstrates a structured mobile e-commerce interface. The application provides clear navigation, organized product display, and a simple authentication system.

The interface ensures that users can easily access the application, log in securely, and browse clothing products efficiently. The overall design maintains consistency, usability, and a professional appearance.
